Files:	PremiumDiscount.ex4 (MT4) PremiumDiscount.ex5 (MT5)
Program type:	Indicator (not an Expert Advisor or script), does not trade
Filter:	Buys only in discount, sells only in premium of the range of N daily candles (article: 20)
Signals:	CHoCH (article) / BOS / any break; with or without a liquidity sweep
Entry modes:	Retest (article) / market / Equilibrium 50% / OTE 62% / 70.5% / 79% / FVG / Order Block
Article timeframe:	H4
Version:	v1.00
Author:	@Strategy4you

1. What are Premium and Discount?

Split the range in half: above the middle (**Equilibrium**, 50%) is **Premium** — "expensive", look for sells; below it is **Discount** — "cheap", look for buys. **OTE** is a 62–79% pullback of the impulse. In the indicator the range = the high and low of the last N completed daily candles (article: 20). Discount by itself is not a signal but a direction filter: the trade follows the BOS/CHoCH article scheme: **liquidity sweep** → **CHoCH** → limit on the **retest of the broken level**, stop beyond the sweep, 3R. In the article test discount did not raise profit per trade versus the base, but trades "against the rule" (buys in premium) were half as good, and a deep OTE entry was worse than the retest.

Full strategy description: https://s4u.pro/en/premium-discount-ict-strategy/

Setup rules

Element	BUY	SELL
Premium / Discount	Close of the CHoCH candle below 50% of the 20-day range — discount	Above 50% — premium
Swings	Fractal: 3 candles on each side, confirmed 3 candles later (no look-ahead)	Same
Liquidity sweep	The leg low pierced a swing low (not older than 60 candles, untouched before) and the candle closed above it	The leg high pierced a swing high and the candle closed below it
CHoCH	Close above the last swing high while the structure was bearish	Close below the last swing low while the structure was bullish
Entry	Buy Limit at the broken level (retest)	Sell Limit at the broken level (retest)
Stop loss	5 pips below the sweep low (indices, crypto, silver, oil: 0.05% of price)	5 pips above the sweep high (indices, crypto, silver, oil: 0.05% of price)
Take profit	3R (3 × risk)	3R (3 × risk)

Order management

Rule	Description
Time cancel	The limit order is cancelled if not filled within 20 candles
Price cancel	The order is cancelled if a candle closes beyond the stop or price reaches the target before the entry
Time exit	The trade is closed at market after 60 candles if neither SL nor TP was hit
One trade at a time	While a trade is open, new signals on this symbol are skipped (SKIP label)
Risk	0.25–0.5% of the account per trade (test drawdown –38R)

What the indicator shows on the chart

- Red zone on top — PREMIUM (sells only), green zone below — DISCOUNT (buys only), dashed line — EQUILIBRIUM 50% and the price position in %
- Dotted segments — Equilibrium of past days (the range is recalculated every day)
- Grey dots — confirmed swing highs and swing lows
- Dotted line labelled **BOS** — break of structure with the trend; dashed line labelled **CHoCH** — change of character. Blue — break up, red — break down. The line runs from the swing to the break candle
- Orange line + "Sweep" — the swept liquidity level and the sweep candle
- Blue arrow ↑ (BUY) / red arrow ↓ (SELL) — the break candle that gave a setup
- Yellow dashed line — entry level; red — Stop Loss, green — Take Profit
- Result label: `+3.0R` (take profit), `−1.0R` (stop), `+0.4R (time)` (time exit), `X` (order cancelled), `BUY LIMIT / SELL LIMIT` (waiting for entry), `OPEN` (trade open), `SKIP (in trade)` (skipped — a trade is already open)
- Statistics panel: settings, signals, trades, cancels, skips, Win / Loss, win rate, total R and average R

2. Signals and entry modes

Which break gives a signal is set by **SignalType** (CHoCH / BOS / any), the liquidity sweep filter by **RequireSweep**, the entry by **EntryMode**. The BOS / CHoCH structure is always drawn, regardless of these settings.

EntryMode	Entry	Best for
Retest	Limit at the broken level. The article strategy (default)	Trading by the article rules
Market	At market on the open of the candle after the break	Aggressive entry, no missed trades
EQ 50%	Limit at the Equilibrium of the leg (from the sweep to the top before the break)	Article comparison: +33.8R
OTE 62 / 70.5 / 79%	Limit at an OTE level of the leg	Comparison: deeper is worse (79%: −42.3R)
FVG	Limit at the first FVG (imbalance) of the leg	The BOS/CHoCH + FVG combination from the article — for comparison
OB	Limit at the Order Block — the last opposite candle at the extreme	The CHoCH + OB combination from the article — for comparison

Article results (34 markets: currencies, metals, indices, oil; H4, 1999 — November 2026, 3R target, spread included)

Variant	Trades	Win rate	Total	PF	Drawdown
Discount/Premium 20d, retest (article)	767	37.2%	+68.9R	1.15	−38.0R
No filter (BOS strategy)	1 448	—	+124.3R	1.14	−44.2R

Opposite: buys in premium	811	—	+37.9R	1.08	−27.6R
Deep discount (lower 40%)	608	—	+63.1R	1.17	−38.2R
Equilibrium 50% entry	582	—	+33.8R	1.08	−41.8R
OTE 70.5% entry	340	—	−9.0R	0.97	−32.5R
OTE 79% entry	120	—	−42.3R	0.60	−46.0R
Same rules on H1	3 080	—	−100.1R	0.95	−180.4R

> 20-day discount: 767 trades, +68.9R, 2024 +33R, 2025 +10R, 2026 +5R, 22 of 34 markets positive. Per trade the same as without the filter (+0.090 vs +0.086R) but half as many trades; buys in premium make +0.047R per trade. OTE 70.5–79% entries are worse than the retest. On H1 the same rules gave −100R — use H4. Check your symbol with the statistics panel.

3. Installing in MetaTrader 4

Step 1 — Open the indicators folder

MT4: File → Open Data Folder → MQL4 → Indicators.

Step 2 — Copy the file

1. Copy **PremiumDiscount.ex4** to the `MQL4\Indicators\` folder
2. Restart MT4 or right-click in the Navigator → "Refresh"

Step 3 — Add it to a chart

1. Navigator (Ctrl+N) → Indicators → **PremiumDiscount**
2. Drag it onto an H4 chart → "Common" tab: optionally tick "Allow DLL imports" (only for the welcome window)
3. Set the parameters on the "Inputs" tab → OK

4. Installing in MetaTrader 5

Step 1 — Open the indicators folder

MT5: File → Open Data Folder → MQL5 → Indicators.

Step 2 — Copy the file

1. Copy **PremiumDiscount.ex5** to the `MQL5\Indicators\` folder
2. Restart MT5 or right-click in the Navigator → "Refresh"

Step 3 — Add it to a chart

1. Navigator (Ctrl+N) → Indicators → **PremiumDiscount**

2. "Dependencies" tab: optionally tick "Allow DLL imports" (only for the welcome window)
3. In MT5 the welcome window appears on the first tick (platform behaviour). OK opens Telegram

> Without DLL permission the indicator works fully — only the welcome window is not shown; the copyright and links stay on the chart.

5. Indicator parameters

PREMIUM / DISCOUNT

Parameter	Default	Description
UsePDFilter	true	Buys only in discount, sells only in premium (article)
RangeDays	20	Range = high / low of the last N completed daily candles
DiscountLevel	50	Discount below N% of the range, premium above 100–N% (40 = deep discount)
ShowPDZones	true	Premium / Discount zones and Equilibrium of the current range
ShowEQHistory	true	Equilibrium of past days as dotted segments
PremiumColor / DiscountColor / EQColor	—	Zone and 50% line colors

MARKET STRUCTURE

Parameter	Default	Description
SwingBars	3	Swing (fractal): N candles on each side. Larger = bigger structure
ShowStructure	true	Draw every BOS / CHoCH
ShowSwings	true	Mark swing highs and swing lows

SIGNAL

Parameter	Default	Description
SignalType	CHoCH	CHoCH / BOS / any break — which break gives a trade
RequireSweep	true	A liquidity sweep must come before the break (article)
SweepLookback	60	The swept swing is not older than N candles
TrendEMA	0	Trend filter: close above / below EMA N (0 = off)

TRADE LEVELS

Parameter	Default	Description
EntryMode	Retest	Retest / market / EQ 50% / FVG / OB / OTE 62 / 70.5 / 79% — see section 2
BufferMode	Auto	Stop buffer: auto (pips for currencies and gold, % of price for others) / always pips / always %
StopBufferPips	5	Stop buffer beyond the sweep extreme, pips (gold: 1 pip = $0.10)
StopBufferPct	0.05	Stop buffer in % of price for indices, crypto, silver, oil

RiskReward	3.0	Take profit in R
PendingBars	20	Cancel the limit order if not filled within N candles
MaxHoldBars	60	Close the trade at market after N candles (0 = off)
CostPips	0	Spread + commission for the statistics, pips (article: 1.5 on majors, 2.5 on crosses, 3.5 on gold)
OneTradeAtATime	true	Statistics: skip new signals while a trade is open

DISPLAY / COLORS / ALERTS

Parameter	Default	Description
HistoryBars	3000	History bars to mark up (0 = all history)
ShowBullish / ShowBearish	true	Show BUY / SELL signals
ShowSweeps	true	Mark the swept liquidity
ShowTradeLevels	true	Entry, SL and TP lines
ShowArrows / ShowResults	true	Signal arrows / result labels
ShowStats	true	Statistics panel
ArrowOffset / ArrowSize	5 / 3	Arrow distance from the wick (pips) / arrow size 1–5
Colors	—	BOS / CHoCH up and down, swings, liquidity sweep, arrows, entry, SL, TP, statistics
AlertPopup / AlertSound / AlertPush	false	Popup / sound / push notification on a new setup
AlertEveryBreak	false	Also alert on every BOS / CHoCH, not only on setups

6. Recommended settings

As in the article (H4, any liquid market)

Parameter	Value
Timeframe	H4
All parameters	Default (20-day range, discount/premium 50%, 3-candle swings, liquidity sweep ≤60 candles, CHoCH, limit on the retest, stop 5 pips / 0.05% beyond the sweep, 3R, limit 20 candles, exit after 60 candles)
CostPips	1.5 on majors, 2.5 on crosses, 3.5 on gold
AlertPopup / AlertPush	true

Structure mark-up only (manual analysis)

Parameter	Value
ShowTradeLevels / ShowResults / ShowStats / ShowArrows	false
AlertEveryBreak + AlertPopup	true

Comparing with the unfiltered base and with OTE

Parameter	Value
UsePDFilter	false — the BOS/CHoCH strategy without the filter
DiscountLevel	40 — deep discount
EntryMode	OTE 70.5% / EQ 50% — test a deep entry

> In the article the strategy was tested on H4 (34 markets, 767 trades). Without a liquidity sweep CHoCH and BOS are around zero. Trades closed by time made +475R in total in the article — do not switch MaxHoldBars off. Check your market with the statistics panel (with CostPips).

7. Frequently asked questions (FAQ)

Q: Does the indicator repaint?

A: No. A swing is confirmed only after 3 closed candles, a break only on a candle close, and it recalculates once per new bar. That is why a swing point appears on the chart 3 candles late — the price of no repainting.

Q: Does the indicator open trades?

A: No. It is an indicator: it marks up the structure, shows entry / SL / TP levels and statistics. It places no orders.

Q: How does the indicator tell BOS from CHoCH?

A: A break in the same direction as the previous one is a BOS. A break in the opposite direction (or the first one in the history) is a CHoCH.

Q: How are the statistics calculated?

A: Without spread by default (gross); set the spread in CostPips. On the candle that fills the limit order only the stop counts; the take profit counts from the next candle (conservative). A profitable time exit counts as a Win. As in the article, only one trade at a time is counted per symbol.

Q: Why don't the panel numbers match the article?

A: The article uses its own quotes and time, crypto from Binance (UTC); your broker has its own quotes, server time, spread and history length. On identical candles the indicator logic matches the article test trade for trade.

Q: No zones on the chart?

A: The indicator needs D1 history. Open the daily chart of the symbol once so the terminal downloads it.

Q: Few signals?

A: The discount filter plus the liquidity sweep leave about 1 trade a year per symbol on H4 — trade many markets at once. To study, switch UsePDFilter or RequireSweep off.
